

**Department of Computer Science Engineering with
Data Science
Year: II, Term: II**

COURSE :Internship Review

Class Instructor:

Mr. A. Rajeshwar
Associate Professor
Department of MCA,
School of Informatics.

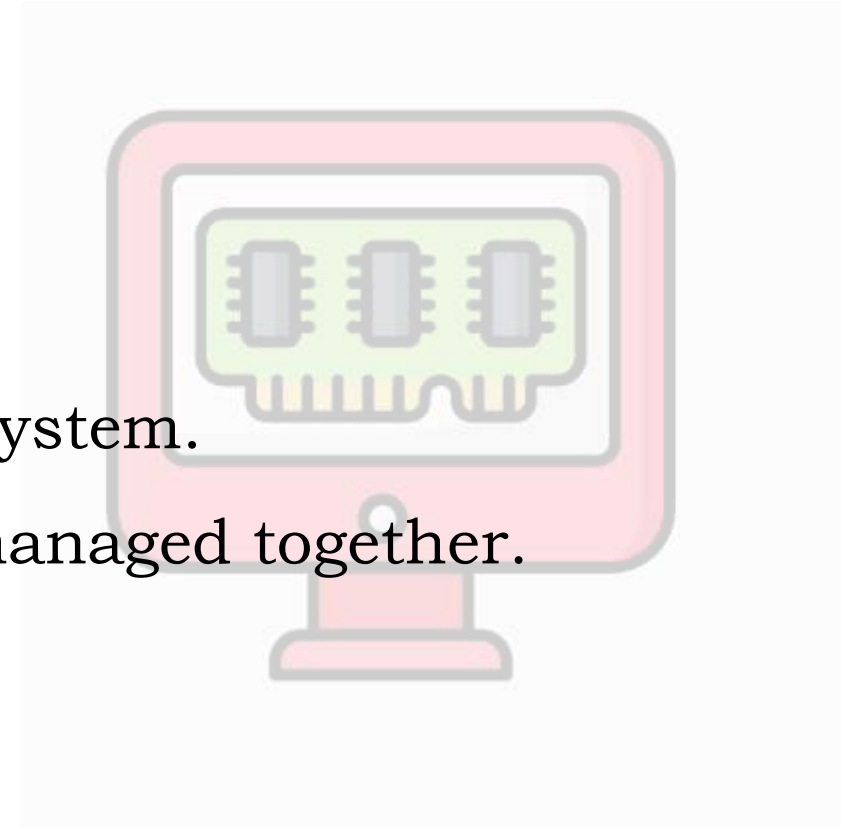

Presented by:

J. Kavya Sri - 241U1R1067

Introduction

What is ERP?

- ERP stands for Enterprise Resource Planning.
- It helps manage all company operations in one system.
- Employees, salary, inventory, and projects are managed together.

Project Objective

- To manage all company operations in a single platform.
- To store and organize employee, salary, inventory, and project data.
- To use AI for generating smart reports, predictions, and alerts.
- To improve productivity and reduce manual work.
- To help companies save time and make better decisions.

Objectives of Internship

- **User Login** – User logs into the system securely.
- **Data Entry** – User enters employee, salary, inventory, or project data.
- **Database Storage** – The system stores the data in a database.
- **AI Analysis** – AI analyzes the stored data and generates insights.
- **Reports & Alerts** – The system creates reports and sends important alerts.
- **Dashboard Display** – All information is displayed on the dashboard for easy monitoring.

My Role in the Project

- Designed and developed web pages using HTML.
- Created attractive layouts and styling using CSS.
- Added interactive features using JavaScript.
- Developed the Login Page for user authentication.
- Built the Dashboard UI to display important information.
- Created a responsive design that works on different devices.

Technical Skills

- **HTML** – Created the structure of web pages.
- **CSS** – Designed and styled the user interface.
- **JavaScript** – Added interactivity and dynamic features.
- **Responsive Design** – Made the website work on different screen sizes.
- **Debugging** – Identified and fixed errors in the code.
- **Team Collaboration** – Worked with team members to complete project tasks.

Conclusion

- Successfully developed frontend components of the ERP system.
- Improved my HTML, CSS, and JavaScript skills.
- Gained experience in real-world project development.
- Learned how ERP systems work in companies.
- Improved problem-solving and teamwork skills.

THANK YOU
